

# Create a Static List

A static list is a tag (StaticList) that can be applied to group products together. They are similar to brands, genders, styles, etc. However, static lists are unique in that you can upload a CSV file of products and assign a static list to each one.

## This Article Explains

This article details how to create a new StaticList tag using a CSV upload then use that tag in recommendations.

## Sections in this Article

- [Upload a New Static List](#)
- [Use a Static List in a Recipe](#)

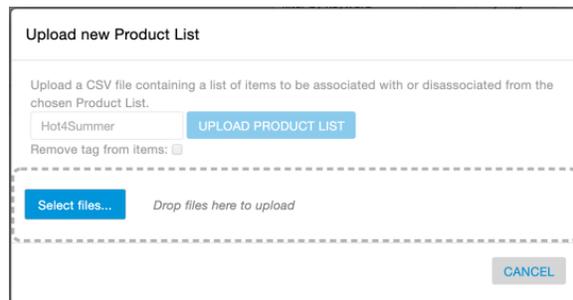

## Upload a New Static List

Before you begin, you'll need to create a CSV file for the upload similar to the image at the right, with *products* entered for cell 1A and, starting at cell 2A, the product IDs for each product that you want to associate (or disassociate) with the *StaticList* tag.

	A
1	products
2	ABC123
3	DEF456
4	GHI789

 You will only see your static list when you navigate to **Catalog > Product Lists** if the list is named exactly *StaticList*.

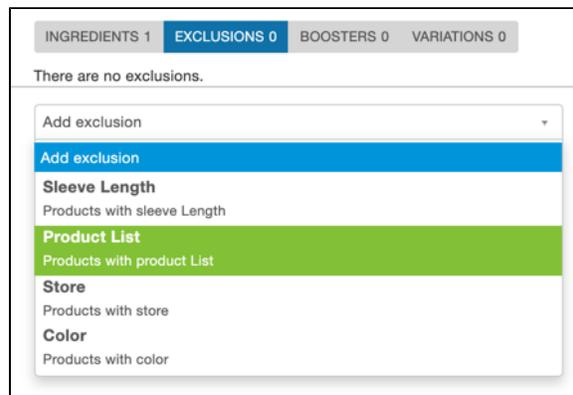

1. Log into Interaction Studio with **Editor** or higher permissions.
2. From the left navigation, select **Settings > Profile and Catalog Objects**.
3. Add a new [Catalog Object](#) where the name is exactly *StaticList* and the label is exactly *Product List*.
4. Click **Save**.
5. Refresh your screen.
6. From the left navigation, select **Catalog > Product Lists**.
7. Click **UPLOAD PRODUCT LIST** in the upper right corner of the screen.
8. In the *Upload New Product List* modal, enter the tag ID you want to use for the list (or the tag that should be removed from the list).
9. If you are removing a tag from a list of items, select **Remove tag from items**.
10. Click **UPLOAD PRODUCT LIST** and select the CSV file you created.
11. Click **Select files** or drag and drop the CSV file within the dotted lines.

## Use a Static List in a Recipe

Once products have been uploaded to a static list, associate the products to a related catalog object so you can use your static list in recipe exclusions and boosters.

1. From the main navigation, select **Settings > Catalog and Profile Objects**.
2. From the **Catalog Object Types** section, select the catalog object that you want to use as the recommendation type for your static list, such as **Article**, **Blog Post**, or **Products**.
3. Click **Add Related Catalog** object.
4. Select **Product List** from the **Select a Related Catalog Object** dropdown.
5. Select **One per Object** for the **Relationship Cardinality**.
6. Click the checkmark icon.
7. Click **Save**.
8. Refresh your browser.
9. [Create a new recipe or edit an existing recipe](#).
10. Click **Recommendation Type** and select the catalog object that you associated with the static list.
11. Add at least one [ingredient](#).
12. You can add a static list as an exclusion/inclusion or a booster:

- a. *Exclusion/Inclusion*: select EXCLUSIONS and select **Product List** from the list of exclusions/inclusions
  - b. *Booster*: select BOOSTERS and select **Product List** from the list of boosters (note: boosters for static lists can only be used when recommending a product, article or blog)
13. Click **SAVE**.
14. Follow the additional instructions for [creating or editing a recipe](#), including [testing](#), [training](#), and [publishing](#) as needed.
